

# HEAVY DUTY BLUE

7< 9A =75@JI @75B=N=B; 79A 9BH

- Specifically formulated for the Chem-Weld series of repair units.

- Works with all Western Weld repair units.

- Provides superior tack.

- Thicker, heavy duty viscosity.

- Distinct, Light Blue Color Appearance.

- Chemical accelerators for cross link vulcanization of the repair unit's facing gum to the tire.

- Will work in hot or cold vulcanizing repair processes.

Heavy Duty Blue (HDB) Chemical Vulcanizing Cement is formulated specifically for applications to provide the superior performance with all Chem-Weld series of Western Weld repairs. The HDB is also compatible to provide ultimate adhesion value with all Western Weld repair units for both chemical and heat applications.

The HDB is a heavy-duty blue cement that provides cross-linking of the uncured rubber molecules of the repairs facing gum. It is a more viscous formula that gives greater green tack during the repair application. It is the preferred vulcanizing cement of tire repair professional throughout the world.
