

RANDOM GRIT TUNGSTEN CARBIDE RUBBER PREPARATION TOOLS

- Economical cost texturing tool
- Excellent rubber preparation bonding surface
- Re-grit program available to reduce operating cost
- Nickel chromium grit bonding for extended lifecycle, as compared to standard bonding materials

Random grit uses a tungsten carbide chip that is brazed on to the base member, with nickel chromium, for long wear and extended use. This process allows for an efficient way to prepare rubber surfaces for bonding or rubber removal. Random Grit is available in different sizes and grits to fit the specific application of rubber texturing.

They are excellent for use in all types of electric or pneumatic powered tools.

Always wear personal protective equipment to include eye, ears, face and body when operating power tools and texture wheels.
