

STRUCTURED GRIT RUBBER PREPARATION TOOLS

- Consistent texture of rubber
 - Enhanced adhesion rubber bonding surface
- Reduction of scorch, lower friction and heat build-up
 - Fastest rubber preparation times
- Available in different sizes and grit variations

Due to the unique design, Structure Grit (SG) series is an excellent option for rubber texture preparation and removal. The unique design allows for cooler preparation which reduces friction scorch and heat build-up. Cooler temperatures of rubber surface enable the structured grit surface to improve bonding adhesion levels over standard, random grit tungsten carbide tools. This may also result in considerable longer life of the tools being used. The SG series rubber preparation tools are excellent for use in all types of electric or pneumatic powered tools

For rubber preparation, only. Do not make contact with steel cables or wires. Always wear personal protective equipment including; eye, ears, face, and body when operating power tools and texture wheels.
